SKILLS

- JavaScript
- HTML/CSS
- Node.js
- Express
- MongoDB
- Postgres
- JQuery
- AJAX
- AngularJS
- React
- Ruby on Rails
- OOP

RELEVANT EXPERIENCE

GENERAL ASSEMBLY

October 2016 - January 2017

Became a web developer after completing immersive program and improved my software engineering skills by learning new technologies and using them to build Full Stack Web Applications (MEAN/MERN stack/Ruby on Rails) which required strong technical and algorithmic knowledge. Worked on both individual and team projects that allowed me to develop my problem solving skills.

PROJECTS:

1. SF-Nights:

MERN Stack

Application that allows you to browse night dance clubs around you and let you comment and rate places just for tonight only. New day - new rating - new comments. (Google API, Yelp API)
Individual project. Completed two way binding between markers on the map and list of places next to it. If place is currently closed users are not authorized to rate and comment on it.

gitHub: <https://github.com/vladyslavkuliani/SF-Nights>

3. Vagabond:

Ruby on Rails

Social network where people can explore and share their impressions about different cities around the world(Ruby on Rails).

Completed controllers logic.

gitHub: <https://github.com/vladyslavkuliani/vagabond-team1>

Heroku: <https://pacific-sands-22246.herokuapp.com>

5. Racing Game:

JavaScript

2D Racing game for two players. The first player to collect 5 flags of his own color is a winner! (canvas manipulations using JavaScript). Individual project.

gitHub: <https://github.com/vladyslavkuliani/Racing-Game>

Heroku: <https://gentle-ravine-24957.herokuapp.com/>

2. KAIZEN:

Ruby on Rails

Staff manipulation application for project managers and team leads that tells the most efficient way of assigning people to tasks within the project. (Ruby on Rails, additional gems for email notifications and gitHub login).

Completed algorithmic part of the project, data base structure, creative ways to send binding arrays of data to server.

gitHub: <https://github.com/vladyslavkuliani/kaizen>

Heroku: <https://radiant-springs-91429.herokuapp.com/>

4. What To Do:

MEN Stack

Social network where users post different "what to dos", asking their friends(followers) for an advice of what to do in specific city at specific time(MEN stack app).

Individual project. Completed CRUD app and front end manipulations using handlebars and jQuery library.

gitHub: <https://github.com/vladyslavkuliani/what-to-do>

Heroku: <https://ancient-caverns-49115.herokuapp.com/>

6. Tic-Tac-Toe:

JavaScript

Basic Tic-Tac-Toe game using JavaScript and jQuery library. Individual project.

gitHub: <https://github.com/vladyslavkuliani/tic-tac-toe>

Heroku: <https://mysterious-gorge-83717.herokuapp.com/>

EDUCATION

GENERAL ASSEMBLY

October 2016 - January 2017

Built fully functional applications utilizing Ruby, Rails, JavaScript, Express, HTML, and CSS with working knowledge in many other frameworks and web development technologies.

September 2012 - June 2015

NATIONAL AEROSPACE UNIVERSITY - 'KHARKIV AVIATION INSTITUTE'

Field of Study: Computer Engineering (Faculty of Computer Systems And Networks)

Studying and completing algorithmic software course works. (C# .NET/C++)
