SKILLS

- JavaScript
- HTML/CSS
- Node.js
- Express
- MongoDB
- Postgres
- JQuery
- AngularJS
- React
- Redux
- Python
- Flask
- REST API
- Algorithms
- Data Structures
- C#
- Ruby on Rails
- OOP

RELEVANT EXPERIENCE

Full Stack Developer at MacroTower — February 2017 - July 2017

Worked in an early stage startup directly with CTO & CEO. The main working technologies used during the project were: React, Redux, Python, Flask. I collaborated with the team to solve problems quickly and build software that helps other companies analyze, predict and clarify their marketing data.

General Assembly — October 2016 - January 2017

Became a web developer after completing immersive program and improved my software engineering skills by learning new technologies and using them to build Full Stack Web Applications (MEAN/MERN stack/Ruby on Rails) which required strong technical and algorithmic knowledge. Worked on both individual and team projects that allowed me to develop my problem solving skills.

Projects:

1. SF-Nights: *MERN Stack*

Application that allows you to browse night dance clubs around you and let you comment and rate places just for tonight only. New day - new rating - new comments. (Google API, Yelp API)
Individual project. If place is currently closed users are not authorized to rate and comment on it.
gitHub: https://github.com/vladyslavkuliani/SF-Nights
https://github.com/vladyslavkuliani/sfNights-server
Heroku: https://sfnights-demo.herokuapp.com

2. KAIZEN: *Ruby on Rails*

Staff manipulation application for project managers and team leads that tells the most efficient way of assigning people to tasks within the project. (Ruby on Rails, additional gems for email notifications and gitHub login).
Completed algorithmic part of the project, data base structure.
gitHub: https://github.com/vladyslavkuliani/kaizen
Heroku: https://radiant-springs-91429.herokuapp.com/

3. Vagabond: *Ruby on Rails*

Social network where people can explore and share their impressions about different cities around the world(Ruby on Rails).
Completed controllers logic.
gitHub: https://github.com/vladyslavkuliani/vagabond-team1
Heroku: https://pacific-sands-22246.herokuapp.com

4. What To Do: *MEN Stack*

Social network where users post different "what to dos", asking their friends(followers) for an advice of what to do in specific city at specific time(MEN stack app).
Individual project. Completed CRUD app and front end manipulations using handlebars and jQuery library.
gitHub: https://github.com/vladyslavkuliani/what-to-do
Heroku: https://ancient-caverns-49115.herokuapp.com/

EDUCATION

General Assembly — October 2016 - January 2017

Built fully functional applications utilizing Ruby, Rails, JavaScript, Express, HTML, and CSS with working knowledge in many other frameworks and web development technologies.

National Aerospace University -'Kharkiv Aviation Institute' — September 2012 - June 2015

Field of Study: Computer Engineering (Faculty of Computer Systems And Networks)

Studying and completing algorithmic software course works. (C# .NET/C++)
